

Claims (clean version encompassing amendments)

- B3
11. (once amended) A kit for use in analyzing the sequence of a polynucleotide of interest comprising:
- (a) a solid support,
 - (b) two amplification primers comprising one member of a specific binding pair, the member being of the same type for both primers,
 - (c) sequencing primers.
12. (once amended) The kit according to claim 11, wherein the solid support is a manifold having a plurality of individual solid phase members and wherein the sequencing primers are differently labelled.
